Shape the Future Across All Ages

October 3rd-5th **MILAN**
Quark Hotel Milano **2025**

www.siaaic2025.org

Rationale

Allergies, together with immunological disorders and asthmatic pathology, affect millions of people in Italy indiscriminately in both paediatric and adult age, using many medical and economic resources of our health system. Among the most common forms of allergies treated in Italy, at hospital, university and private institutes, there are: respiratory allergies (asthma and rhinitis), food allergies, skin allergies (atopic dermatitis, angioedema, urticaria), drug allergies, and reactions to hymenoptera venom. All these diseases can occur in mild and moderate forms, but sometimes also in severe forms such as systemic anaphylaxis and severe asthma, which can be life-threatening for those affected.

This year, the XXXVII National Congress of the SIAAIC will be enriched by a large international delegation, thanks to the collaboration with the World Allergy Organisation (WAO), allowing for an in-depth study and comparison between internationally renowned experts in allergic diseases, especially in their most complex aspects.

In addition to age and exposure, the environment is a significant risk factor for allergic and immunological diseases, influenced by climate change and pollution. The congress will address, in several sessions, the influence of climate change on the onset and severity of allergic and immunological diseases, both in the autoimmune and allergological fields.

The congress will pay special attention to rare diseases (vasculitis, EGPA, EES, immunodeficiencies, mastocytosis, angioedema) and autoimmune diseases, with a special focus on Systemic Lupus Erythematosus with daily sessions dedicated to improving knowledge in this broad area of the allergologist's and clinical immunologist's expertise.

In addition, another topic of great interest will be the study of allergic disease and symptom burden, which are crucial in the shared decision-making of diagnostic pathways and patient treatment. Various immunopathogenetic processes will be discussed as well as how the identification of cellular and molecular mechanisms can lead to precise phenotypic and endotypic diagnoses, useful for determining new therapeutic targets.

Finally, special attention will be paid to the innovations offered by artificial intelligence in medicine. The choice of new algorithms, the increasing use of biological drugs with monoclonal antibodies and specific immunotherapy will be the focus of discussion. These approaches represent fundamental treatments for allergic diseases and offer the possibility of disease remission, an ambitious goal for allergo-immunology specialists.

Shape the Future Across All Ages

October 3rd-5th **MILAN**
Quark Hotel Milano **2025**

www.siaaic2025.org

Topics

ALLERGOLOGY

- Anaphylaxis
- Angioedema
- Drugs allergy
- Food allergy
- Hymenoptera venom allergy
- Mastocytosis
- Molecular diagnostics

ARTIFICIAL INTELLIGENCE

ENVIRONMENT

- Aerobiology
- Allergy and sport
- Environment and climate change
- Epithelial barrier damage
- Microbiome
- Pollution
- Professional allergology

DERMATOLOGY

- Atopic dermatitis
- Contact dermatitis
- Urticaria

EOSINOPHILIAS

- Eosinophilic granulomatosis with polyangiitis (EGPA)
- Eosinophilic oesophagitis
- Gastrointestinal eosinophilias
- HES

CLINICAL IMMUNOLOGY

- Autoinflammatory diseases
- Clinical remission in allergy and clinical immunology
- Interstitial and autoimmune diseases
- Primary and secondary immunodeficiencies
- Rare diseases
- Rheumatoid and psoriatic arthritis
- Scleroderma
- Systemic Lupus
- Erythematosis
- Systemic sarcoidosis
- Sjogren's syndrome
- Vasculitis

IMMUNOTHERAPY

- Autoimmunity
- Allergen-specific immunotherapy
- Biological immunotherapies

- Maintenance of vaccine immunity in adulthood
- Management of vaccine reactions
- Monoclonal antibodies and small molecules

RESPIRATORY

- Bronchial asthma
- Chronic cough
- CRS and nasal polyposis and allergic rhinoconjunctivitis
- Rhinitis/Conjunctivitis

VACCINE PROPHYLAXIS

FURTHER TOPICS

- Diagnostic and Therapeutic Care Pathways (PDTA)
- Disease control and remission
- Doctor-patient communication
- Gender medicine
- Instrumental diagnostics in allergology and clinical immunology
- Laboratory medicine/biology
- Nursing
- Research in allergology (real life studies)
